

Add a free SMLC Property Search page to your website by creating an iframe link

Please note that this is for setting up free SMLC IDX Search pages that may be framed within your website. This is NOT an IDX RETS feed.

Start by Logging in to Matrix and go to My Matrix / Settings / IDX Configuration.

Now you will create your page. You can create as many search pages as you like. Anywhere along the way, you can check what the search page will look like by changing from the Settings to the Preview Tab.

1. Select "Create a new IDX page".

2. Give it a name

Now select the type of IDX page you want.

If you select "My Listings", you must choose from your personal listings or your office listings.

If you select "Map Search", it allows searching all SMLC IDX listings.

3. Select the type of search page you want

If you select My Listings, you must select personal or office.

Define the Map Area to create custom search areas.

Check "Do not specify a map area" for a full SMLC IDX map search.

Check "Restrict searches to a specified map area" if you want to create custom search areas such as County or City or neighborhood. After you select this, you will need to click "Modify Map Area", draw a polygon around the area you want in the search and save it.

Check "Specify an initial map view" allows you to set the initial map zoomed in to a particular area. It does not prevent the prospect from changing the view if they want to search elsewhere.

4. Define the Map Area

This map link will change depending on what you checked above.

Activate and save the IDX search configuration.

Click IDX Enabled then Save. Once you have saved the configuration, the HTML link will be created. This is the link you will copy, paste and send to your website developer.

5. Activate the configuration.

6. Save the Configuration

Here is your Link!
